## **DETAILED ACTION**

## Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-19, drawn to coal cleaning system, method, and apparatus, classified in class 209, subclass 33.
- II. Claims 20-23, drawn to a magnetic separator, classified in class 209, subclass221.
- III. Claims 24-26, drawn to a vibratory separator, classified in class 209, subclass 346.
- IV. Claims 27-30, drawn to a method for separating according to specific gravities, classified in class 209, subclass 606.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the coal cleaning system of invention I does not require a magnetic separator as claimed in claim 20. The magnetic separator of the coal cleaning system and apparatus can be any kind of magnetic separator and can be different from that claimed in claim 20. The

Art Unit: 3653

subcombination has separate utility such as a magnetic separator that separates magnetic

particles from mixtures other than coal, including soil or dirt mixtures, sawdust mixtures, and

any sort of mixtures.

Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the coal cleaning system of invention I does not require a vibratory separator as claimed in claim 24. The vibratory separator of the coal cleaning system and apparatus can be any kind of vibratory separator and can be different from that claimed in claim 24. The subcombination has separate utility such as a vibratory separator that separates other mixtures other than coal mixtures, including soil or dirt mixtures, woodchip mixtures, and any sort of mixture that requires sifting.

Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination II has separate utility such as a magnetic separator used on its own, only as a magnetic separator and not part of a cleaning and separating system. See MPEP § 806.05(d).

Inventions I and IV are related as products which share an alleged common utility of separating a mixture but the common utility is not linked to a substantial structural feature. The products in this relationship are distinct if either or both of the following can be shown: (1) that the products encompass embodiments that are not required to perform the common utility or (2) that the products as claimed can be used to perform another utility. In this case, the products of invention II can be used to perform another utility other than separating coal, including separating a mixture of soil and dirt with different specific gravities or separating a mixture of wood chips from other materials with different specific gravities.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Application/Control Number: 10/808,006 Page 5

Art Unit: 3653

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kaitlin S. Joerger whose telephone number is 571-272-6938. The examiner can normally be reached on Monday - Friday 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eileen Lillis can be reached on 571-272-6928. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
